DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1,2, 18-27 and 48-60, drawn to a heating apparatus comprising a one piece low porosity thermally conductive mass.
- II. Claims 7-14, drawn to a heating apparatus comprising a multiple piece low porosity thermally conductive mass.
- III. Claims 28-40, drawn to a method of making a heating apparatus.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP j 806.05(9)). In the instant case the heating apparatus of claims 1-2, and 18-27 can be made by a materially different process, e.g. attaching or thermally coupling the heating means to the outside of the thermally conductive mass instead of mounting heater means in the thermally conductive mass, or as argued by the applicant, the method can be used to make a materially different apparatus, namely a heating apparatus consisting of a multiple piece thermal mass as claimed in claims 7-14. It is noted that an action on the merits has been issued in the case, however, the applicant continued arguments to the significance of a "one piece" thermal mass indicates a need to the examiner to restrict the application at this time. Further discussion on the merits of the rejections on record will be held in abeyance at this time.
